Chiropractic Maintenance Care

Two Reasons Why Your Family Needs Maintenance Care

<u>The first</u> is the concept of Immobilization Degeneration (ID). One of the primary components of the vertebral subluxation complex is decreased movement of the spinal

joint. 40 years of research tells us that when a joint loses normal movement, **ID begins to occur at a measurable rate within one week.**

<u>Two</u>, many times **patients do not feel pain immediately** when a subluxation occurs much like you don't feel immediate pain from a cavity in a tooth. Pain may not show up until the degeneration causes a large amount of damage. Again, how long do you want to wait?

Aim High is deeply concerned about making sure your body is able to function to the best of its ability and be as healthy as

possible for as long as possible. That's why we recommend <u>regular spinal check-ups for</u> everyone for a lifetime. Why a lifetime? How long do you want to be healthy?
